Dear Hiring Manager,

I'm Dhafin, Informatics Engineering student from Bandung Institute of Technology. I applied for the Software Engineer Internship. With a strong passion in this field, i have done a lot of projects, either paid, volunteer, or just for fun. I'm best at things related to Backend Development, Fullstack Web Development, and also Game Development. But I'm actually pretty well all arounded. it's just that those are the opportunities that keeps coming to me.

My most notable achievement are being the **Most Outstanding Informatics** Student and getting **1st Place on Gemastik** GameDev which is the **biggest informatics competition** in Indonesia attended by 206 Universities all over Indonesia. As for my experience, i have done an **internship** before as **Computer Vision Engineer** and Web Game Developer. I have also done **6 freelance paid projects**, from web, game, and desktop app. I'm also a member of **Programming Laboratorium Assistant** in my major, which has a very competitive selection process. Only 10 from over 100 are accepted. One thing that is very unique about me is that i have created a usefull tool, published on Github, with over **500 stars**, a feat that's very rare for any college students to achieve. More about my technical things can be seen on my web portfolio here **https://dhafinfawwaz.com**.

Other than my technical expertise, I'm also very active on organizations. i've been the head of programming, vice head of Research and Development, head of new member admission which was a chaotic and busy 6 month selection process. I have done an external relation work for an event as well, inviting speakers from other companies, and many more. I also have volunteered as a **tutor** for introduction to computer science and web based development exam. I also have become **speaker** for Game Dev for my major's student orientation and for an interactive media organization.

I am truly excited about the opportunity to have an internship in this company, where I can contribute to innovative projects, collaborate with and learn from talented engineers, and continue growing as a Software Engineer. Thank you for your time and consideration. I'm looking forward to hearing from you soon.

Best regards,

Dhafin
